AGSC 01. Introduction to Agricultural and Environmental Resources. 1 Credit. (1 Lec) F
PREREQUISITE: Freshman or New Transfer Students. This course is optional but all freshmen in the College of Agriculture are strongly encouraged to enroll. Students taking this course will be introduced to all areas of the very broad field of agriculture, including all department programs and areas of specialty, career opportunities, professionalism, history, and ethics.

AGSC 242. Crop Identification. 1 Credit. (1 Lab) F
Meets first third of semester. Recognition and identification of seed, vegetative parts, and floral structure of the major species of cereals, forage legumes, and grasses.

AGSC 290R. Undergraduate Research. 1-6 Credits. (1-6 Ind; max unlimited) F,S
PREREQUISITE: Consent of instructor. Directed undergraduate research/creative activity which may culminate in a written work or other creative project. Course will address responsible conduct of research.

AGSC 291. Special Topics. 1 Credit. (1 Lec) On Demand
PREREQUISITE: None. Offered when the need arises.

AGSC 292. Independent Study. 1-3 Credits. (1-3 Ind; 6 cr max) On Demand
PREREQUISITE: Consent of instructor and approval of department head.

AGSC 341. Field Crop Prod. 3 Credits. (3 Lec) S alternate years, to be offered every even year.
Production of field crops using practical and applied crop management principles. Emphasis includes understanding of crop management principles and application of problem solving capabilities to field crop management situations.

AGSC 342. Forages. 3 Credits. (2 Lec, 1 Lab) F
PREREQUISITE: BIOB 110. Principles of applied forage crop management including establishment, irrigation, fertilization, pests, harvesting, and forage integration of many legume and grass species.

AGSC 356. Plant Nutrition and Soil Fertility Management. 3 Credits. (3 Lec) F
PREREQUISITES: ENSC 245IN and CHMY 121IN or CHMY 141. Applied management of soil fertility to meet plant nutrition needs in agronomic and horticultural systems. Diagnosis of plant nutrient deficiency and toxicity, management of fertilizer and organic sources of plant nutrients, and assessment of environmental effects of soil fertility management.

AGSC 401. Integrated Pest Management. 3 Credits. (3 Lec) F
PREREQUISITE: BIOB 262 and one of the following: BIOB 100IN, BIOB 170IN or consent of instructor. This course focuses on conceptual approaches to integrated pest management. The overall framework will be the effective production of foodstuffs to meet increasing demands for safe and healthy commodities for consumers. By integrating multiple tactics, the production of food can be optimized given the current limitations to traditional “silver bullet” pest management. Material covered will include the definitions of IPM terminology as applied to weed, arthropod, and microbial pests; management tactics including biological, cultural, and chemical controls; host plant resistance and genetic modification; sample case studies; applicability to specialized production systems.

AGSC 428. Sustainable Cropping Systems. 3 Credits. (3 Lec) S
PREREQUISITE: ENSC 245IN and either AGSC 341 or AGSC 342 or consent of instructor. The course goal is to elevate agricultural students' awareness of peer-reviewed literature that demonstrates application of principles to address issues of sustainability in agriculture. The course will use a student-led discussion format to highlight issues and principles in review of a series of papers that the class will read. The course will focus on the interaction among agronomy, ecology, economics, and sociology to create an awareness of the interdisciplinary issues associated with sustainability in agriculture. Topical issues associated with climate change impacts, system resilience and thresholds and ways to understand complex interactions will be considered for discussion. Co-convened with LRES 529.

AGSC 441. Plant Breeding & Genetics. 3 Credits. (3 Lec) S alternate years, to be offered odd years.
PREREQUISITE: BIOB 375 or BIOB 377. The genetic principles and practices involved in plant breeding. Selection of plant breeding methods based on an understanding of a plant species genetics and reproductive mechanisms. The class includes hands on experience in plant breeding through a series of lab and greenhouse exercises.

AGSC 450. Plant Disease Control. 3 Credits. (3 Lec) S alternate years, to be offered odd years.
PREREQUISITE: BIOM 421 or consent of instructor. This course will provide comprehensive coverage of the concepts of integrated management of plant diseases. Concepts covered include regulatory, cultural, chemical, host plant resistance, and biological controls. Students will be introduced to epidemiology and weather-based predictive computer models for use in disease management programs.

AGSC 454. Agrostology. 3 Credits. (1 Lec, 2 Lab) F alternate years, to be offered odd years.
PREREQUISITE: BIOB 230. Determination, classification, evolution, and nomenclature of grasses and grass-like plants; morphological and ecological features; preparation of reference specimens.

AGSC 455. Molecular Plant-Microbe & Insect Interactions. 3 Credits. (3 Lec) S alternate years
PREREQUISITE: BIOL 160. This course is to teach students the molecular mechanisms by which plants and pathogens/insects interact during the progress of pathogenesis or resistance, the understandings of how plants recognize relatively conserved microbial patterns to active defense.

AGSC 465R. Health, Agriculture, Poverty. 4 Credits. (1 Lab) F,S
PREREQUISITE: Junior standing. Students will explore health and agriculture, poverty. Course will culminate in a research paper, journal article, or undergraduate thesis. USP scholarships or project support grants are available in many cases. Course will address responsible conduct of research. May be repeated.

AGSC 491. Plant Nutrition and Soil Fertility Management. 3 Credits. (3 Lec) F
PREREQUISITE: Approval of instructor, ENSC 245IN and CHMY 121IN or CHMY 141. Applied management of soil fertility to meet plant nutrition needs in agronomic and horticultural systems. Diagnosis of plant nutrient deficiency and toxicity, management of fertilizer and organic sources of plant nutrients, and assessment of environmental effects of soil fertility management.

AGSC 492. Independent Study. 1-3 Credits. (1-3 Ind; 6 cr max) On Demand
PREREQUISITE: Junior or Senior standing and approval of instructor. Directed undergraduate research/creative activity which may culminate in a research paper, journal article, or undergraduate thesis. USP scholarships or project support grants are available in many cases. Course will address responsible conduct of research.

AGSC 495. Health, Agriculture, Poverty. 4 Credits. (1 Lab) F,S
PREREQUISITE: Senior standing and approval of instructor. Directed undergraduate research/creative activity which may culminate in a research paper, journal article, or undergraduate thesis. USP scholarships or project support grants are available in many cases. Course will address responsible conduct of research. May be repeated.

AGSC 496R. Undergraduate Research. 1-6 Credits. (1 Ind; 12 cr max) F,S
PREREQUISITE: Approval of instructor, ENSC 245IN and CHMY 121IN or CHMY 141. Applied management of soil fertility to meet plant nutrition needs in agronomic and horticultural systems. Diagnosis of plant nutrient deficiency and toxicity, management of fertilizer and organic sources of plant nutrients, and assessment of environmental effects of soil fertility management.

AGSC 450. Independent Study. 1-3 Credits. (1-3 Ind; 6 cr max) On Demand
PREREQUISITE: Junior standing, consent of instructor and approval of department head. Directed research and study on an individual basis.
