EELE - Electrical Engineering

EELE 101  Introduction to Electrical Fundamentals: 3 Credits (1 Lec, 2 Lab)
PREREQUISITE: M 151Q or equivalent. Lecture/laboratory introduction to electrical fundamentals including Kirchhoff’s and Ohm’s Laws, using meters and oscilloscopes, time-varying signals in electric circuits, inductors and capacitors, series and parallel circuits, introduction to digital circuits, problem solving including computer applications, technical communications, teamwork

EELE 201  Circuits I for Engineering: 4 Credits (3 Lec, 1 Lab)
PREREQUISITE: EELE 101, M 172
COREQUISITE: PHSX 222. Introduction to circuit analysis, Ohm’s and Kirchhoff’s Laws, nodal and mesh methods, network theorems; resistors, capacitors, inductors, dependent sources, ideal op-amps; the complete response of first order circuits; complex frequency and phasors; steady-state AC circuits, coupled inductors and ideal transformers

EELE 203  Circuits II for Engineering: 4 Credits (3 Lec, 1 Lab)
PREREQUISITE: EELE 201, M 274. Natural and forced response of R-L-C circuits, frequency response of R-L-C circuits and Bode plots, frequency response, slew-rate and DC imperfections of real op-amps; Laplace Transform, Fourier series and Fourier Transform techniques in circuit analysis; basic R-L-C and op-amp filters; two port networks

EELE 217  The Science of Sound: 2 Credits (2 Lec)
PREREQUISITE: M 121Q, M 132, or M 105Q, or the equivalent. Introduction to the principles of musical acoustics, sound systems, and audio technology for non-engineering students. This course is particularly geared toward students in the College of Arts and Architecture and in the Music Technology program

EELE 250  Circuits, Devices and Motors: 4 Credits (3 Lec, 1 Lab)
PREREQUISITE: M 166 or M 172 and PHSX 207 or PHSX 222. Introduction for non-majors to electrical circuit principles, voltage and current laws, frequency response; introduction to electronic circuits including operational amplifiers, and power electronics; introduction to electromechanical energy conversion devices, DC and AC machines

EELE 261  Intro To Logic Circuits: 4 Credits (3 Lec, 1 Lab)
An introductory course in the fundamental concepts of classical digital design. Course covers design and implementation of combinational logic circuits, synchronous sequential circuits and information storage circuits. Basic concepts of Hardware Description Languages (HDLs), design and simulation of digital systems using HDLs, and digital system implementation with programmable logic devices are presented.

EELE 290R  Undergraduate Research: 1-6 Credits (1-6 Other)
Directed undergraduate research which may culminate in a written work or other creative project. Course will address responsible conduct of research. May be repeated. Repeatable up to 99 credits.

EELE 291  Special Topics: 1-4 Credits (1-4 Lec)
PREREQUISITE: None required but some may be determined necessary by each offering department. Courses not required in any curriculum for which there is a particular one-time need, or given on a trial basis to determine acceptability and demand before requesting a regular course number
Repeatable up to 12 credits.

EELE 292  Independent Study: 1-3 Credits (1 Other)
PREREQUISITE: Consent of instructor and approval of department head. Directed research and study on an individual basis
Repeatable up to 6 credits.

EELE 298  Signals and Systems Analysis: 4 Credits (3 Lec, 1 Lab)
PREREQUISITE: EELE 203, M 273, and EGEN 350. Discrete and continuous time signals and systems. Properties, application, synthesis and analysis for the CT and DT Fourier Series, the Fourier transform, the DTFT, z and Laplace transform. Applications in differential and difference equations, sampling, feedback, and communications. Introduction to the DFT. Laboratory experience emphasizing applications in differential and difference equations, sampling, and engineering data analysis

EELE 317  Electronics: 4 Credits (3 Lec, 1 Lab)
PREREQUISITE: EELE 203. This is an introductory course in electronics. It introduces diodes, bipolar junction transistors, field effect transistors and bipolar and MOS analog and digital circuits

EELE 321  Introduction To Feedback Controls: 3 Credits (3 Lec)

EELE 334  Electromagnetic Theory I: 3 Credits (3 Lec)
PREREQUISITE: PHSX 222, M 273. Basic electric and magnetic fields including transmission lines. The materials covered will include both static and dynamic fields, traveling waves, and transmission line concepts such as impedance, reflection coefficient, and transient response

EELE 354  Electric Power Applications: 3 Credits (2 Lec, 1 Lab)
PREREQUISITE: M 166 or M 171Q and PHSX 207 or PHSX 222. An applied study of electricity and electrical power circuits, with laboratory experience, for that person not expected to deal with electronics or advanced circuit techniques. Topics covered include electrical circuit laws; power and energy; alternating current circuits; residential, commercial and industrial wiring; wire sizing, three-phase circuits; and application of transformers and electric motors

EELE 355  Energy Conversion Devices: 4 Credits (3 Lec, 1 Lab)
PREREQUISITE: EELE 203. Three-phase power; electromechanical energy conversion devices and motor drives; introduction of power electronic converters for power control and motor drive applications. Laboratory experience includes power measurements; experience with transformers and motor-generator operational characteristics and DC and AC motor drives operation.

EELE 367  Logic Design: 4 Credits (3 Lec, 1 Lab)
PREREQUISITE: EELE 261 Advanced combinational and sequential logic design. Hardware descriptive language (HDL) programming knowledge. Laboratory experience implementing advanced logic designs using FPGAs

EELE 371  Microprocessor HW and SW Systems: 4 Credits (3 Lec, 1 Lab)
PREREQUISITE: EELE 261 and knowledge of a programming language or consent of instructor
COREQUISITE: CSCI 109 or CSCI 112. Introduction to the structure of microprocessors, arithmetic and logic units, processor control, interrupts, memories, and input/output. Laboratory experience in assembly level programming of microprocessor applications

EELE 394  Multidisciplinary Seminars: 1 Credits (1 Other)
PREREQUISITE: Junior standing. Students attend seminars presented by a variety of departments and disciplines to gain an appreciation of multidisciplinary environments leading to a greater understanding of the impact of engineering solutions in a global and societal context
EELE 407 Intro To Microfabrication: 3 Credits (2 Lec, 1 Lab)
PREREQUISITE: Junior standing and PHSX 222 or PHSX 207. Provide an introduction to clean room safety protocol and micro fabrication. Lectures will introduce micro fabrication methods, models and equipment. Laboratories will perform the steps to produce and characterize a metal-oxide-semiconductor transistor. -

EELE 408 Photovoltaic Systems: 3 Credits (2 Lec, 1 Lab)
PREREQUISITE: PHSX 222. Provide a basic understanding of the design, fabrication and operating principles of solar cells and how they are integrated into photovoltaic systems. Laboratories will perform the steps required to produce and characterize silicon solar cells. -

EELE 409 EE Material Science: 3 Credits (3 Lec)
PREREQUISITE: EELE 317. Basic material properties of dielectrics, magnetic materials, conductors, and semiconductors. Practical applications of materials to semiconductor devices

EELE 411 Advanced Analog Electronics: 3 Credits (3 Lec)
PREREQUISITE: EELE 317. To be offered odd years. This course covers differential and multistage amplifiers, frequency response, feedback, analog integrated circuits, filters, and tuned circuits, analog to digital and digital to analog conversion, noise in electronics, current topics

EELE 417 Acoustics/Audio Engineering: 3 Credits (3 Lec)
PREREQUISITE: PHSX 222. Introduction to the principles of acoustics, audio engineering, and audio signal processing. Propagation of sound in enclosures. Engineering analysis of loudspeakers, microphones, and recording devices. Human psychoacoustics

EELE 418 The Art of Biochips – An Introduction to BioMEMS: 3 Credits (3 Lec)
PREREQUISITE: PHSX 222 (mainly COE: EE, ME, ChE), or EBIOS 216 (ChBE), or BIOB 260 (Neuro, Cell, Immuno), or NEUR 313 (BioChem), or CHMY 325 (Organic Chem). “The art of biochips” is an introductory course into the interdisciplinary and rapidly growing field of developing, fabricating, testing and translating Biomedical devices using Micro Electro Mechanical Systems (BioMEMS). This course will be offered as a co-convened class with ELEE 509 which is at the graduate level. The course content is intended for non-specialized upper-level undergraduates and graduate students with basic knowledge in chemistry, biology, or physics, and will introduce the miniaturization of devices to handle biological things at a scale we cannot control with our fingers or see with our naked eyes

EELE 422 Intro to Modern Control: 3 Credits (3 Lec)

EELE 432 Applied Electromagnetics: 3 Credits (3 Lec)
PREREQUISITE: EELE 334 or PHSX 423. Advanced study of electromagnetic wave propagation, including polarization, reflection and refraction at interfaces, and cavities and multilayer structures, to investigate a number of practical devices with applications related to electrical engineering and optics, such as waveguides, fiber optics, and antennas

EELE 445 Telecommunication Systems: 4 Credits (3 Lec, 1 Lab)
PREREQUISITE: EELE 308, EELE 317. Introduction to analog and digital communication systems with lab. Topics include signals in communications; noise characterizations; bandwidth considerations; probability of error; analog and digital modulation; frequency domain analysis; matched filter applications. Experiments involve modulation, demodulation, A/Ds, sampling theory, and aliasing

EELE 447 Mobile Wireless Communications: 3 Credits (3 Lec)
PREREQUISITE: EELE 445. Characteristics of the radio environment, propagation, cellular concepts, channel allocation, modulation techniques, multiple access techniques, Shannon’s Capacity Theorem, error-correcting codes, data compression, spread spectrum modulation, current wireless communication systems

EELE 448 Optical Communications Systems: 3 Credits (3 Lec)
PREREQUISITE: EELE 308 and EELE 445 or consent of instructor. Advanced undergraduate/early graduate level course in fiber-optic communication systems and networks. Topics include: Optical fibers and transmission effects, optical transmitters, modulators, optical receivers, optical amplifiers, and intensity-modulation/direct-detection systems. Graduate students will also study coherent optical communications systems, digital signal processing for optical communications, and optical networking

EELE 451 Power Electronics: 3 Credits (2 Lec, 1 Lab)
PREREQUISITE: EELE 317, EELE 321 and EELE 355. Introduction to solid-state power devices; topologies, operating principles, modeling and control, and design of basic power converters; magnetic design; applications of power converters in renewable energy source power systems, electric and hybrid electric vehicles, and other residential, commercial, and industrial systems; laboratory experience with basic power converters

EELE 452 Power System Operation and Control: 3 Credits (3 Lec)
PREREQUISITE: EELE 454. The course will help students to understand the nomenclature and layout of generation and power delivery. The focus of the course is on electrical faults and contingency calculations, economic operation of large-scale generation and transmission systems. Fast-decoupled power flow, economic load dispatch, optimal power flow, voltage control, load-frequency control, control of active and reactive power flow are presented in this course. A special emphasis is placed on applications of computer-based methods to power-system problems

EELE 454 Power Systems Analysis and Design: 3 Credits (3 Lec)
PREREQUISITE: EELE 355. Power system fundamentals and components, power transformers, transmission system design, power flow studies, power system equivalent models, symmetrical components

EELE 455 Alternative Energy Power Gen: 3 Credits (3 Lec)
PREREQUISITE: EELE 355 or equivalent. Exploration and analysis of alternative power generation sources and systems such as wind, solar, microturbine, and fuel cells, combined sources and their design, power electronic interfacing, and energy storage systems. Co-convened with ELEE 555

EELE 456 Power Sys Protection & Ctl: 3 Credits (3 Lec)
PREREQUISITE: EELE 454 or equivalent. Continuation of EELE 454. Symmetrical and unsymmetrical fault analysis, system protection, introduction to load frequency control, voltage control, economic dispatch, and introduction to power system stability

EELE 461 Digital System Design: 3 Credits (3 Lec)
PREREQUISITE: EELE 308 and EELE 334 and EELE 371. Analysis and design of high speed digital systems including chip-to chip signal propagation, transmission lines, IC package interconnect, printed circuit board design, state-of-the-art simulation tools, and measurement techniques using Time Domain Reflectometry (TDR)

EELE 465 Microcontroller Applications: 4 Credits (2 Lec, 2 Lab)
PREREQUISITE: EELE 371. Lecture/laboratory exposure to micro controller hardware and software applications, serial and parallel I/O, timing, interrupts LCDs, keypads, A to D conversion, and a project realizing a real time control problem
ELE 467 SoC FPGAs I: Hardware-Software Codesign: 4 Credits (3 Lec, 1 Lab)  
PREREQUISITES: ELE 367 (or VHDL Programming Experience) and CSCI 112 (or C Programming Experience). Design of advanced digital systems using System-on-Chip (SoC) Field Programmable Gate Arrays (FPGAs). Design of custom hardware components for the FPGA fabric using VHDL. Implementation of custom hardware-software interfaces. Writing programs and Linux device drivers in C to interact with custom hardware. Laboratory experience developing custom systems using SoC FPGAs.

ELE 468 SoC FPGAs II: Application Specific Computing: 4 Credits (3 Lec, 1 Lab)  
PREREQUISITES: ELE 467  
Design of custom digital systems using SoC FPGAs, emphasizing computational tasks such as digital signal processing, audio, or video processing. Department of Electrical Computer Engineering.

ELE 477 Digital Signal Processing: 4 Credits (3 Lec, 1 Lab)  
PREREQUISITE: ELE 308. Analysis and design of discrete-time systems, including frequency response. Sampling and reconstruction of continuous signals. Analysis, design, and applications of FIR and IIR digital filters. Properties and applications of the discrete Fourier transform. Laboratory experience implementing off-line and real time digital signal processing algorithms.

ELE 481 Optical Design: 3 Credits (3 Lec)  
PREREQUISITE: ELE 482 or PHSX 427. Optical design using geometric optics and computer ray-tracing software. Introduces ray and wave front aberrations, control of aberrations in optical systems, designing for system requirements, and analytic tools including the modulation transfer function.

ELE 482 Electro-Optical Systems: 3 Credits (2 Lec, 1 Lab)  
PREREQUISITE: ELE 334 or PHSX 423 or equivalent. Provides an overview of electro-optic systems and components. Lectures cover ray optics, scalar wave optics, laser and Gaussian beam optics, optical polarization and polarization devices, light sources, detectors, and electro-optic and acoustic-optic photonic devices. Laboratory experiments introduce basic photonic instrumentation and measurement techniques.

ELE 484 Laser Engineering: 3 Credits (3 Lec)  
PREREQUISITE: PHSX 222. The laser engineering course provides a basic understanding of the design and operational principles of lasers. Discussions of design and operation of several types of lasers will be covered including solid state lasers, gas lasers, and semiconductor lasers.

ELE 487 Prof. Ethics & Engr Practices: 1 Credits (1 Lec)  
PREREQUISITE: Junior standing. Engineers from industry and others give presentations on professionalism, ethics, and engineering practices. Included are specific well-known, historical engineering ethics cases and professional practices of engineering, intellectual property issues, and new developments in design.

ELE 488R Electrical Engineering Design I: 2 Credits (2 Lec)  
PREREQUISITE: ELE 317 and EGEN 310R. Part I of a two consecutive semester senior capstone design sequence in Electrical Engineering. Students, under the guidance of a faculty supervisor, formulate a solution to a real-world design problem culminating in a critical design review. Co-convened with ELE 489R.

ELE 489R Electrical Engr Design II: 3 Credits (3 Lec)  
PREREQUISITE: ELE 488R. The second of a two consecutive semester senior capstone design sequence in Electrical Engineering. Students, under the guidance of a faculty supervisor, realize, assess and document the performance of their solution to a real-world design problem. Co-convened with ELE 488R.

ELE 490R Undergraduate Research: 1-6 Credits (1 Other)  
Directed undergraduate research which may culminate in a research paper, journal article, or undergraduate thesis. Course will address responsible conduct of research. May be repeated. Repeatable up to 6 credits.

ELE 492 Independent Study: 1-3 Credits (1 Other)  
PREREQUISITE: Junior standing, consent of instructor and approval of department head. Directed research and study on an individual basis. Repeatable up to 6 credits.

ELE 498 Internship: 1-2 Credits (1 Other)  
PREREQUISITE: Sophomore standing and consent of instructor. On-site, one semester practicum under guidance of employer designated mentor. Repeatable up to 12 credits.

ELE 503 Advanced Analog Circuit Design: 3 Credits (3 Lec)  
PREREQUISITE: ELE 317. Solid state device models, p-scape and other computer simulations, single and multiple state amplifier design, current sources, operation amplification design, frequency response, feedback and feed forward amplifier analysis, noise and distortion in electronics.

ELE 505 MEMS Sensors and Actuators: 3 Credits (2 Lec, 2 Lab)  
PREREQUISITE: ELE 409. Micro fabrication of electrical and mechanical devices. Theory of various mechanical transducers and physical sensors including optical MEMS, RF MEMS, and Bio/Chemical MEMS.

ELE 508 Solar Cell Basics for Teachers: 2 Credits (1 Lec, 1 Lab)  
This graduate course introduces the concepts of the design, fabrication and operating principles of solar cells and how they are integrated into photovoltaics systems. The course contains a laboratory experience where the graduate students perform the steps required to produce and characterize silicon solar cells. Offered Summer.

ELE 509 The Art of Biochips - Solving Healthcare Problems with BioMEMS: 3 Credits (3 Lec)  
PREREQUISITE: All students must be full-time graduate student in good standing. "The art of biochips" is an introductory course into the interdisciplinary and rapidly growing field of developing, fabricating and translating Biomedical devices using Micro Electro Mechanical Systems (BioMEMS). This course will be offered as a co-convened class with ELEE 418 which is at the undergraduate level. The course content is intended for graduate students with basic knowledge in chemistry, biology, or physics and non-specialized upper-level undergraduates, and will introduce the miniaturization of devices to handle living things at a scale we cannot control with our fingers or see with our naked eyes.

ELE 517 Acoustics/Audio Engineering: 3 Credits (3 Lec)  

ELE 522 Adaptive Control: 3 Credits (3 Lec)  

ELE 525 System Identification: 3 Credits (3 Lec)  

ELE 526 Sequential State Estimation: 3 Credits (3 Lec)  
PREREQUISITE: ELE 422. Sequential state estimation, with emphasis on Kalman filtering and smoothing. Continuous and discrete time.
ELE 528. Advanced Controls and Signals: 3 Credits (3 Lec)
PREREQUISITE: ELE 422 or equivalent. Reading, discussion and exploration of original source material on advanced control systems and signal processing. Topics selected to complement current interest and existing courses; for example, computational statistical methods, estimation, modeling, compression, advanced analytical techniques, multi-dimensional systems, spectral analysis, and implementation. Repeatable up to 6 credits.

ELE 533. Antenna Engineering: 3 Credits (3 Lec)
PREREQUISITE: ELE 334 or equivalent. Introduction to the electromagnetic theory and practice of antenna design and analysis. Common antenna structures are studied, including dipoles, arrays, horns, and reflectors. Applications will be explored in wireless communication, remote sensing, and related fields. Numerical electromagnetic simulation techniques are used for antenna modeling.

ELE 538. Advanced Electromagnetics & Optics: 3 Credits (3 Lec)
Advanced topics in applied electromagnetics and optics, chosen to represent current research in this field. Repeatable up to 6 credits.

ELE 541. Advanced Communication Theory: 3 Credits (3 Lec)

ELE 543. Advanced Telecom Systems: 3 Credits (3 Lec)
PREREQUISITE: ELE 445. Digital and analog switching systems, packet and circuit telecommunication transmission networking and media selection (fiber optics, cable, microwave and satellite), network configuration, network technologies, equipment selection, system design examples and project.

ELE 547. Ad Hoc Wireless Sensor Networks: 3 Credits (3 Lec)
PREREQUISITE: ELE 447 and ELE 543. Stationary and mobile sensor network topologies, RF technologies, frequency selection, link layer and media access protocols, energy management techniques, mobility management, standards, and applications.

ELE 548. Optical Communications Systems: 3 Credits (3 Lec)
PREREQUISITE: ELE 308 and ELE 445. Advanced undergraduate/early graduate level course in fiber-optic communication systems and networks. Topics include: Optical fibers and transmission effects, optical transmitters, modulators, optical receivers, optical amplifiers, and intensity-modulation/direct-detection systems. Graduate students will also study coherent optical communications systems, digital signal processing for optical communications, and optical networking.

ELE 552. Power System Operation and Control: 3 Credits (3 Lec)
PREREQUISITE: ELE 454. Representation of power system elements, fast-decoupled power flow, optimal power flow, voltage control, load-frequency control, control of active and reactive power flow, application of FACTS devices in power flow control, electrical faults and contingency calculations, transient stability, dynamic stability.

ELE 555. Alternate Energy Dist Gen Systems: 3 Credits (3 Lec)
PREREQUISITE: ELE 355. Exploration and analysis of alternative power generation sources and systems such as wind, solar, microturbine, and fuel cells, combined sources and their design, power electronic interfacing, and energy storage systems. Co-convened with ELE 455.

ELE 556. Advanced Power Electronics: 3 Credits (3 Lec)
PREREQUISITE: ELE 451. Mathematical modeling of switching power converters, advanced power converter topologies, design constraints and control methods, design-oriented analysis techniques for applications in electro-mechanical systems, power systems, transportation systems, etc.

ELE 558. Advanced - Electrical Power: 3 Credits (3 Lec)
PREREQUISITE: ELE 454 or equivalent. Reading, discussion and exploration of advanced electrical power topics including power system operation and control, power dynamics, power markets, protection, electric drives, or power electronics. Repeatable up to 6 credits.

ELE 561. Digital System Design: 3 Credits (3 Lec)
PREREQUISITE: ELE 308 and ELE 334 and ELE 371. Analysis and design of high speed digital systems including chip-to-chip signal propagation, transmission lines, IC package interconnect, printed circuit board design, state-of-the-art simulation tools, and measurement techniques using Time Domain Reflectometry (TDR) and Vector Network Analyzers. Research of modern topics.

ELE 565. Parallel Processing: 3 Credits (3 Lec)

ELE 577. Adv Digital Signal Processing: 3 Credits (3 Lec)
PREREQUISITE: ELE 447. Advanced topics in digital signal processing. Review of LTI discrete-time systems; signal and coefficient quantization; sample rate conversion and multirate filter structures; time-varying and adaptive systems; fast algorithms; system implementation alternatives; DSP applications in current research.

ELE 578. Speech Signal Processing: 3 Credits (3 Lec)
PREREQUISITE: ELE 447. Digital signal processing techniques that are used to analyze, code, and manipulate speech signals will be covered. Topics include: modification, coding, enhancement, and recognition of speech signals.

ELE 581. Fourier Optics/Imaging Theory: 3 Credits (3 Lec)
PREREQUISITE: ELE 334 or consent of instructor. Optical propagation and diffraction using scalar wave approach and Fourier Theory of imaging. Introduces concepts of pupil function, point and line spread function and optical transfer function, image formation with coherent and incoherent light, holography and diffractive optical elements.

ELE 582. Optical Design: 3 Credits (3 Lec)
PREREQUISITE: ELE 482 or PHSX 427. Optical design using geometric optics and computer ray-tracing software. Introduces ray and wave front aberrations, control of aberrations in optical systems, designing for system requirements, and analytic tools including the modulation transfer function for describing the imaging and beam-conditioning properties of typical optical systems, including lenses, mirrors, cameras, and telescopes.

ELE 583. Remote Sensing Systems: 3 Credits (3 Lec)
PREREQUISITE: ELE 334 or PHSX 423 or equivalent. Design, analysis, and calibration of electromagnetic remote sensing systems. Combines an introduction to atmospheric radiative transfer and wave propagation principles with detailed coverage of radiometry and optical detectors to analyze remote sensing systems. The course considers the full electromagnetic spectrum, but emphasizes optical systems at ultraviolet, visible, and infrared wavelengths, including cameras, spectrometers, radiometers, polarimeters, multispectral and hyperspectral imagers, laser radars, etc.
EELE 584  Laser Engineering: 3 Credits (3 Lec)
PREREQUISITE: PHSX 222. The laser engineering course provides a basic understanding of the design and operational principles of lasers. Discussions of design and operation of several types of lasers will be covered including solid state lasers, gas lasers, and semiconductor lasers.

EELE 589  Graduate Consultation: 1-3 Credits (1-3 Other)
PREREQUISITE: Master’s standing and approval of the Dean of Graduate Studies. This course may be used only by students who have completed all of their course work (and thesis if on a thesis plan) but who need additional faculty or staff time or help.
Repeatable up to 3 credits.

EELE 590  Masters’ Thesis: 1-10 Credits (1-10 Other)
PREREQUISITE: Master’s standing
Repeatable up to 99 credits.

EELE 591  Special Topics: 1-4 Credits (2-8 Lab)
Special Topics.
Repeatable up to 12 credits.

EELE 592  Independent Study: 1-6 Credits (1-6 Other)
Independent study for electrical engineering students.
Repeatable up to 6 credits.

EELE 598  Internship: 1-12 Credits (1 Other)
PREREQUISITE: Graduate standing, consent of instructor and approval of Department Head. An individual assignment arranged with an agency, business or other organizations to provide guided experience in the field.
Repeatable up to 12 credits.

EELE 690  Doctoral Thesis: 1-10 Credits (1-10 Other)
PREREQUISITE: Doctoral standing
Repeatable up to 99 credits.
