ERTH - Earth Systems

ERTH 101IN  Earth System Sciences: 4 Credits (3 Lec, 1 Lab)  
(F, Sp) Examination of basic geologic processes, Earth and planets through geologic time, internal geosystems, and surficial geosystems.

ERTH 201IN  Honors Earth System Science: 4 Credits (3 Lec, 1 Lab)  
PREREQUISITE: Enrollment in the MSU Honors Program. Offered on demand. This Honors course explores the complex interactions occurring at all scales between the Earth’s geosphere, biosphere, hydrosphere, atmosphere, and anthroposphere. The goal of the course is to understand the Earth as a “system” of interconnected sources of energy through deep geologic time and space.

ERTH 212RN  Yellowstone: Scientific Lab: 4 Credits (3 Lec, 1 Other)  
Offered Fall, odd years. The Yellowstone region is an unparalleled laboratory for earth scientists. The volcanic, glacial, climatic, and ecological processes that shaped the region will be introduced through lecture, discussions, and projects. Recitation sections and field trips provide additional hands-on experiences.

ERTH 303  Weather and Climate: 3 Credits (3 Lec)  
PREREQUISITE: ERTH 101IN or ERTH 201IN. The climates of the continents, and their classification, characteristics and interrelationships with other factors of the physical and human environment.

ERTH 307  Principles of Geomorphology: 4 Credits (3 Lec, 1 Lab)  
PREREQUISITE: ERTH 101IN or ERTH 201IN and GPHY 284. Framework, processes, processes, and time as factors which control the generation of land forms. Laboratories involve field trips and map interpretation, and computer modeling.

ERTH 432R  Surface Water Resources: 3 Credits (2 Lec, 2 Lab)  
PREREQUISITE: Junior Standing, ERTH 101IN and STAT 216Q or STAT 332 and PHSX 205 or PHSX 220. Offered on demand. Physical analysis of the surface portion of the hydrologic cycle: climate, evapotranspiration, precipitation, runoff, flooding, stream channels, sediment production, sediment transport and drainage basins. The surface-water resource in terms of regional supply and human use and intervention. Laboratory fee required.

ERTH 450R  Snow Dynamics and Accumulation: 4 Credits (1 Lec, 3 Lab)  
PREREQUISITE: ERTH 101IN or ERTH 201IN, STAT 332, PHSX 205 or PHSX 220, and ACT 160. Senior capstone for the Snow Science Option. The accumulation, redistribution, and metamorphism of snow as related to humans. Avalanche, recreation, agriculture, silviculture, runoff, and the alpine environment. Field studies are conducted on a regular basis under rigorous field conditions.

ERTH 484  Climates of the Past, Present and Future: 3 Credits (3 Lec)  
PREREQUISITE: ERTH 101IN and Junior standing. This course is an opportunity to learn about the history of the western US over the last 2 million years through a critical analysis of current and historic literature. It will provide an overview of the tools and approaches used to study past environmental change, significant events in the climate history of region, the geologic record of ice-age environments, including glaciation, pluvial lakes, and vegetation, the evolution of the postglacial landscape, and important biotic and human events during the Holocene. Co-convened with ERTH 584.

ERTH 490R  Undergraduate Research: 1-6 Credits (1 Other)  
PREREQUISITE: Consent of instructor. Directed undergraduate research which may culminate in a research paper, journal article, or undergraduate thesis. Course will address responsible conduct of research. May be repeated. Repeatable up to 12 credits.

ERTH 491  Special Topics: 1-4 Credits (1-4 Lec, 1-4 Lab)  
Offered on demand. Repeatable up to 4 credits.

ERTH 494  Seminar: 1 Credits (1 Other)  
PREREQUISITE: Junior standing and as determined for each offering. Offered on demand. Repeatable up to 4 credits.

ERTH 498  Internship: 2-12 Credits (2-12 Other)  
PREREQUISITE: Junior standing, consent of instructor, and approval of department head. An individualized assignment arranged with an agency, business or other organization to provide guided experience in the field. Repeatable up to 12 credits.

ERTH 499  Senior Thesis/Capstone: 3 Credits (3 Other)  
PREREQUISITE: Senior standing; minimum 3.0 cum gpa; faculty recommendation. Senior thesis provides an opportunity to conduct research under the supervision of a faculty member leading to the production of a research paper (“mini-thesis”) and an oral presentation to the department or at a professional meeting. Excellent preparation for graduate school and professional work.

ERTH 505  Geomicrobiology: 3 Credits (3 Other)  
(Sp) Offered Spring of even years. The course examines geochemical and microbial interactions that control earth surface processes and ultimately major biogeochemical cycles. The course focuses on how integrated approaches using geochemistry, stable isotope geochemistry and microbial techniques are applied to research problems.

ERTH 512  Mtn & Plns Riparian Proc: 2 Credits (2 Lec, 2 Other)  
PREREQUISITE: ERTH 101IN, secondary teaching certification plus two years teaching experience; recommended ERTH 516 and access to the world wide web. Riparian hydrologic and geomorphic processes with examples drawn from the mountains and plains. Ground-water recharge and discharge; Horton overland flow; partial variable runoff areas; riparian best management practices; sapping, types of springs; sediment from slopes. K-12 riparian science education.

ERTH 516  North Rocky Mtn Geology: 2 Credits (1 Lab, 1 Other)  
(Su) Geologic history of Northern Rocky Mountains, and landscapes from Archean to present. Structural, tectonic, and surficial elements. Field examination of geologic evidence for history of the Gallatin Range, Bridger Range, and Yellowstone National Park. Exploration and development of teaching methods and resources for the K-12 classroom. Offered Summer.

ERTH 519  Watershed Hydrology for Teachers: 3 Credits (1 Lec, 1 Lab, 1 Other)  
(Sp) Offered Spring of odd years. Watershed hydrology for teachers explores the relationship of water quality and water quantity. Students in the course will learn about relationships among watershed hydrology, including water quality, water quantity, water inputs and outputs, effects of modification of watersheds and more. Offered Spring.

ERTH 520  Fundamentals of Oceanography for Teachers: 3 Credits (3 Lec)  
(Every summer, Spring of even years) This course will provide students with an introduction to the chemical, physical, biological and geological properties of the ocean. Students will learn the complexities of these interrelationships, their influence on terrestrial ecosystems and the impacts of humans on these processes.
**ERTH 521 Geology of the Moon for Teachers: 3 Credits (3 Lec)**

(Sp) Offered Spring of even years. Geology of the Moon is an on-line course designed for educators interested in learning about the Moon and its history and relationship to Earth. We will explore theories for its formation and the geologic processes that have helped it to evolve including, differentiation, volcanism, impact cratering, space weathering and former, current and upcoming missions to the Moon. Students will review presentations and assigned readings and interactively participate through a combination of on-line discussions, classroom exercises and dynamic activities. Students will keep a course journal that will help them develop future moon-related curricula for their future use. Offered even Springs.

**ERTH 522 Teaching Middle School Earth System Science: 3 Credits (3 Lec)**

This course for middle school teachers uses Problem Based Learning (PBL) to explore the processes and interactions between the geosphere, hydrosphere, atmosphere, and biosphere. Teachers will examine processes within and among the four major Earth systems and increase pedagogical skills through modeling PBL, teacher networking, and sharing of ideas and resources. Offered even Springs.

**ERTH 523 Weather for Elementary and Middle School Teachers: 3 Credits (2 Lec, 1 Lab)**

(*) Offering to be determined. The course is designed to increase content knowledge and understanding of weather processes. It exposes teachers at the elementary and middle school level to using kit-based, hands-on instruction to facilitate the teaching and learning of weather concepts (meteorology). Weekly discussions encourage reflection on learning and teaching and help solidify weather concepts. will also maintain a weather observations journal in which they will apply their skills and knowledge. Assignments and quizzes are included to help with knowledge acquisition. Offered in the Spring (odd years).

**ERTH 524 K-14 Earth System Science: 3 Credits (3 Lec)**

(F) Participants will learn to find the Internet’s abundant digital Earth Systems Science (ESS) resources and use these resources to create Earth Science lessons that integrate the use of Earth Science specific skills, math, and content. Participants will learn to adapt online resources to their own instructional environments at the K-14 levels. Offered Fall.

**ERTH 525 Landforms for Elementary Teachers: 1 Credits (1 Lec)**

(Su) In this 8 week online course we will investigate landform science. We will look at a variety of landscapes and how they came to look like they do. We will model landforms and encourage sharing and discussions of teaching ideas in our course. This course intends to: 1) strengthen and deepen the elementary teacher’s understanding of basic concepts of landforms and landform analysis; 2) increase the K-6 teacher’s level of landform content knowledge and science principles; and 3) increase the K-6 teacher’s pedagogical skills in teaching science in general and landform science in particular. Offered Summer.

**ERTH 527 Weather & Climate for Teachers: 3 Credits (3 Lec)**

(Sp) This graduate course uses weekly readings, discussions, and hands on activities to build a physical understanding of weather and climate, and to equip our teachers and educators with the tools to better prepare and motivate the next generation of Earth scientists. Offered Spring.

**ERTH 528 Climate Change for Teachers: 3 Credits (3 Lec)**

PREREQUISITE: ERTH 527 or equivalent. (Su) The science of climate change is a complex subject that balances the physical record and scientific fact with politics, policy, and ethics. This course, specially designed for practicing science teachers at the upper middle to high school level, explores the science of climate change. Offered Summer

**ERTH 551 Snow Science Seminar: 3 Credits (2 Lec, 1 Lab)**

PREREQUISITE: Graduate Standing; PHYS 211, STAT 332 or STAT 500. (F) Offered Fall of even years. A mixed lecture and laboratory style course providing an in-depth examination of recent developments in snow science based upon current literature, newly published or about to be published literature, field methods and modeling regarding snow science. Topics will depend partially upon the interests of the instructor and student in the course.

**ERTH 562 Advanced Geomorphology: 3 Credits (3 Lec)**

PREREQUISITE: ERTH 507 COREQUISITE: M 172Q or equivalent. (F) Offered Fall of odd years. This course will provide students an advanced view into active, ongoing research in geomorphology. The course is designed for advanced undergraduate students and graduate students who have taken a previous course in geomorphology. Emphasis will be placed on the tools available to analyze and interpret geomorphic processes, active research in the field, and the interactions of geomorphic processes with other fields of geology, geology, hydrology, chemistry, etc.

Repeatable up to 6 credits.

**ERTH 583 Topics in Paleocology: 3 Credits (3 Other)**

PREREQUISITE: Graduate Standing or Consent of Instructor. Course examines important themes in paleocology. Topics change on a yearly basis addressing needs and interests of current students. It is intended for students with an interest in ecology, paleontology and environmental history.

**ERTH 584 Climates of the Past, Present and Future: 3 Credits (3 Lec, 3 Other)**

PREREQUISITE: ERTH 101IN or BIOB 170IN or equivalent. (Sp) This graduate course examines current research and recent developments in Quaternary paleoclimatology in the western U.S. The seminar will be centered around weekly discussions of the primary literature, hands-on experience with international data bases, and class paper and presentation. Co-convened with ERTH 484

**ERTH 585 Advances in Geobiology: 1 Credits (1 Other)**

Discussion of recent developments in paleontology, paleoecology, biogeochemistry, and biogeography based on current literature and presentation of faculty and student works in progress. Repeatable up to 3 credits.

**ERTH 587 Invertebrate Paleontology for Teachers: 3 Credits (3 Lec)**

( Sp) The course is designed for practicing or pre-service teachers. This course will focus on the evolution of invertebrate life throughout Earth's history. As a result of this course, students will demonstrate an understanding of evolutionary processes. Through class discussions and assignments, students will identify the vast diversity of both extinct and extant invertebrates, and their interrelationships with one another. At the end of the course, students will be able to: • Describe the evolution and processes involving in organismal change through time • Identify the diversity within invertebrate clades • Describe phylogenetics and the interrelationships of invertebrates • Create a unit of study specific to their teaching situation that incorporates major course content specific to the evolution of vertebrate life.

**ERTH 588 Professional Development: 1-3 Credits (1-3 Lec)**

PREREQUISITE: Graduate standing, teaching experience and/or current employment in a school organization, consent of instructor and Dean of Graduate Studies. Courses offered on a one-time basis to fulfill professional development needs of in service educators. A specific focus is given to each course which is appropriately subtitled. May be repeated Repeatable up to 3 credits.
ERTH 589 Graduate Consultation: 3 Credits (3 Other)
PREREQUISITE: Master’s standing and approval of the Dean of Graduate Studies. This course may be used only by students who have completed all of their course work (and thesis if on a thesis plan) but who need additional faculty or staff time or help.

ERTH 590 Master’s Thesis: 1-10 Credits (1 Other)
PREREQUISITE: Master’s standing. (F, Sp, Su)
Repeatable up to 99 credits.

ERTH 591 Special Topics: 1-4 Credits (1-4 Other)
PREREQUISITE: Upper division courses and others as determined for each offering. Offered on demand. Courses not required in any curriculum for which there is a particular one time need, or given on a trial basis to determine acceptability and demand before requesting a regular course number.
Repeatable up to 12 credits.

ERTH 592 Independent Study: 1-4 Credits (1-4 Other)
PREREQUISITE: Graduate standing, consent of instructor, approval of Department Head and Dean of Graduate Studies. (F, Sp) Directed research and study on an individual basis.
Repeatable up to 6 credits.

ERTH 594 Seminar: 1-4 Credits (1-4 Other)
(Su) Course prerequisites as determined for each offering. Topics offered at the graduate level which are not covered in regular courses. Students participate in preparing and presenting discussion material.
Repeatable up to 4 credits.

ERTH 595 Historical Geology for Teachers: 3 Credits (1 Lec, 1 Lab, 1 Other)
(F) The course will provide a rigorous overview of the evolution of Earth and its life forms with a focus on the major trends and interactions between geology and life. Additionally, the course will address the primary methods that geologists use to investigate the history of our planet. Throughout the semester students will be required to participating in online class discussions (via Zoom) and complete a class project. The class project will require students to create lesson plans designed to adapt content from the course to their own classrooms.

ERTH 596 Geology of Glacier National Park for Teachers: 2 Credits (1 Lec, 1 Lab)
(Su) A field course for teachers of science examining geologic evidence for the evolution of the rocks and landscape of Glacier National Park and surrounding areas over geologic time. Offered summer.

ERTH 597 Vertebrate Paleontology for Teachers: 3 Credits (2 Lec, 1 Lab)
(Spring even years) This course will focus on the evolution of vertebrate life throughout Earth’s history. As a result of this course, students will demonstrate an understanding of evolutionary processes. Through class discussions and assignments, students will identify the vast diversity of both extinct and extant vertebrates, and their interrelationships with one another. At the end of the course, students will be able to: • Describe the evolution and processes involving in organismal change through time • Identify the diversity within vertebrate clades • Describe phylogenetics and the interrelationships of vertebrates • Create a unit of study specific to their teaching situation that incorporates major course content specific to the evolution of vertebrate life.

ERTH 598 Internship: 2-12 Credits (2 Other)
PREREQUISITE: Graduate standing, consent of instructor and approval of department head. (F, Sp, Su) An individualized assignment arranged with an agency, business or other organization to provide guided experience in the field.
Repeatable up to 12 credits.

ERTH 690 Dissertation Research: 1-10 Credits (1-10 Other)
PREREQUISITE: Doctoral candidate standing.
Repeatable up to 99 credits.

ERTH 694 Doctoral Seminar: 1-3 Credits (1-3 Other)
PREREQUISITE: Doctoral candidate standing.
Repeatable up to 6 credits.
